Reviews

A superior quality book along with the font employed was exciting to see. It is one of the most amazing book i have got read through. You wont really feel monotony at anytime of the time (that's what catalogs are for about in the event you ask me).

Book Condition: New. Publisher/Verlag: Elsevier Books | This book provides a sound foundation for understanding abstract concepts of phase and reaction equilibria (e.g. partial molar Gibbs energy, fugacity, and activity), and shows how to apply these concepts to solve practical problems using numerous clear examples. It also presents numerical methods necessary for solving real-world problems as well the basic mathematics needed, facilitating its use as a self-study reference work. In the example problems requiring MATHCAD[®] for the solution, the results of the intermediate steps are given, enabling the reader to easily track mistakes and understand the order of magnitude of the various quantities involved. Clear layout, coherent and logical organization of the content, and presentation suitable for self-study Provides analytical equations in dimensionless form for the calculation of changes in internal energy, enthalpy, and entropy as well as departure functions and fugacity coefficients Includes up-to-date information, comprehensive in-depth content and current examples in each chapter Includes many well organized problems (with answers), which are extensions of the examples enabling conceptual understanding for quantitative/real problem solving Includes the mathematical background required for solving problems encountered in phase and reaction equilibria Provides an instructor's solutions manual | 1. Review of the First and Second Laws of Thermodynamics 2. Thermodynamic Properties of Real Substances 3. Calculation of Changes in Internal Energy, Enthalpy, and Entropy 4. Equilibrium and Phase Stability in One-Component Systems 5. Fugacity of a Pure Component 6. Thermodynamics of Mixtures 7. Fugacity of a Component in a Mixture 8. Excess Mixture Properties and Activity Coefficients 9. Vapor-Liquid Equilibrium 10. Solubility of Gases in Liquids 11. Liquid-Liquid Equilibrium 12. Phase Equilibria Involving Dissolved Solids in Liquids 13. Chemical Reaction Equilibrium 14. Heterogeneous Reactions and Multireaction Equilibria | Format: Hardback | Language/Sprache: english | 1650 gr | 244x198x37 mm | 744 pp.
